

COOLREGION

3rd Regional network meeting

General information

Topic: Energy efficient buildings (vision 2030)

Date & Location: 7 December, 2007, Ljubljana, Slovenia, State council hall at event

"RES and RUE for Slovenia until 2030"

Organizer: Slobiom; Building and Civil Engineering Institute ZRMK contributed with

the above topic to a strategic discussion

Number of participants: 50

Short description

BCEI ZRMK presented a vision 2030 about the role of building sector in RES and RUE in Slovenia. Buildings are large energy consumers, due to the growing energy demand, the focus has to move form only heating also to cooling energy consumption. What is the strategic approach? Reduction of cooling demand, the use of energy efficient cooling devices, use of renewables for cooling. What are the instruments: new challenge for regulation and minimum requirements, EPBD methodology may support such and approach, awareness raising in specific target groups – architects, investors, public sector, teachers and students.

Background

At the above occasion key actors – researchers, NGOs, students, politicians were present. In the frame of the ZRMK's presentation the cooling issue in the building sector was presented as one of the important issues until 2030 and positioned in the on-going efforts for energy efficiency improvement and CO2 reduction in building sector.

Agenda

Regional network meeting 3: Workshop with key actors on EE cooling market

Organized by SLOBIOM, BCEI ZRMK - covered RES in building - vision 2030

12.00 Welcome (Ministry, SLOBIOM)

12:15 Incentives for RES and RUE in Slovenia

13:20 Discussion

13:40 Break

14:00 RES and RUE in Slovenia – vision 2030

(introduction, PV, solar thermal, geothermal, small hidro, biomass, *RES in buildings* – *vision 2030 including EIE Coolregion message*, wood, successful awareness raising programmes)

16:45 Discussion

17:30 Conclusion

Results, follow-up

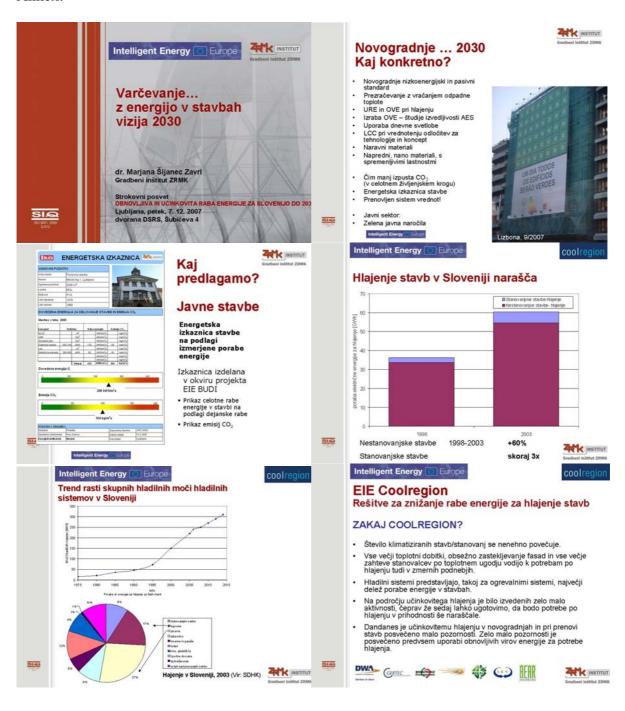

Conclusions of 3rd regional network meeting:

After the presentations the discussion developed where the key actors in the energy sector discussed the importance of presented topics. New aspect of building energy use (cooling energy demand) was recognized as important issue and the actors stressed their expectations about new building regulation and cooling related requirements. RES should be considered as an energy source for cooling tool.

Further Information

Annex:

coolregion

PRIČAKOVANI REZULTATI

- nabor ukrepov za učinkovito hlajenje,
- izpopolnitev znania.
- vetovanje o zasnovah učinkovitega hlajenja na pilotnih primerih,
- dvig energetske ozaveščenosti.

Intelligent Energy [60] Europe

nizkoemisijsko zasteklitvijo

· Dodatna senčila v atriju hlajenje 792 MWh, i.e. 85 kWh/m2

· 9 276 m2

Izgradnia 2003

SLO primer dobre prakse - Mobitel IT center

· ovoj - lahka konstrukcija s povprečno toplotno zaščito, EE okna z

Centralni sistem hlajenja / AC, kompresor zrak/voda moči 1443 kW Zmanjšanje notranja toplotne obremenitve zaradi uporabe dnevne svetlobe in energijsko učinkovite umetne razsvetljave

Intelligent Energy 🔯 Europe

SLO primer dobre prakse - Večstanovanjska stavb - občinski stanovanjski sklad Izola

- · 2 stavbi, vsaka 30 stanovanj
- · 2.800 m2
- 2005
- stene betonska masivna konstrukcija, 10 cm toplotne izolacije, EE okna z nizkoemisijsko zasteklitvijo 1,1 W/m2K
- · Posebna geometrijska zasnova fasade, ki zagotavlja poletno senčenje lož, tudi s premičnimi senčili.
- Pol-transparentna tekstilna senčila za zmanišanje vstopa sončnega sevanja
- Pasivni solarni ukrepi za zmanjšanje pregrevanja stavbe

SLO primer dobre prakse - MENERGA stavba

- · Ovoj in konstrukcija masivni beton
- Toplotna izolacija 16 cm
- · Zmanjšanje toplotnih mostov na najmanjšo možno mero
- okna nizkoenergijska dvojna zasteklitev
- · Toplotno aktivirano betonsko jedro- za ogrevanje in hlajenje
- 2.720 m2

- n.a. (test run only); potreba po hladilni moči 27 W/m2;
- · Letna skupna raba energije v stavbi 533 GJ
- Letna raba energije za ogrevanje 317 GJ

Intelligent Energy DEurope

SLO primer dobre prakse - prenova Mercator, Brod

- · Stene opeka, nizka raven toplotne zaščite
- Okna dvojna zasteklitev1,1 W/m2K
- 610 m2
- Izgradnja v 60-tih, prenova v 2005
- Senčila na južnem izložbenem oknu
- Fiksno senčilo na nadstrešku
- Načrtovanje nočnega prezračevanja znižanje Tnot poleti!
- Hladilne naprave so potrebne zaradi prodaje živil so pomemben vir hladu v stavbi.
- Vgrajena centralna hladilna naprava, odpadna toplota se porablja za ogrevanje sanitarne tople vode
- Letna poraba elektrike za hlajenje 37 MWh,
- Specifična raba elektrike za hlajenje 61 kWh/m2

Intelligent Energy O Europe

Nočno naravno prezračevanje poleti zniža dnevno temperaturo notranjega zraka za najmanj 2 oC, že pri nespremenjenem načinu uporabe podnevi
